[Solaris P2V Process](#)

In this article, we will discuss various differences between Solaris 10 EFI and SMI label.

EFI Label:

1. Provides support upto 2TB disk.
2. All data will be written into 1st slice.
3. You can use 0-6 slices.
4. Partitioning will start from sector 34 as EFI label takes 34 sectors to store information.
5. No cylinder or head concept.
6. Data writing based upon blocks only.
7. Cannot boot system from EFI labeled disk.
8. format.dat file not required as EFI doesn't store information in any file.

SMI Label:

1. SMI label provides information about disk or partition size in cylinder, head, sectors, etc.,
2. All data is stored into 2nd slice.
3. SMI labeled disk is good for boot disk.
